OUR SERVICES

Wireless Engineering

More than twenty years of experience serving the telecom industry with high end solutions specialize in RF Engineering services, which include Network design, In-Building / DAS Solutions, Network Testing, Network Optimization, Network Expansion, Technology Migration and RF exposure measurement. Telnet provides these services as turnkey or technical outsourcing. We also provide R&D services to develop tailored solution to existing problems.

Network Deployment Services

TELNET has worked with all the Major Wireless Carrier, Vendors and Service providers in Network Deployment Services

. We have the expertise and experience to provide Tower Maintenance and Upgrade, Small Cell

Deployment, DAS/Wifi installation, Microwave/Backhaul Solution, Site Audits, and Project Management.

Project Management

TELNET has its own Online Project Management and Data Exchange system, SMX, through which it manages large scale project and exchange data from multiple locations. Clients, Project Managers, Vendors and crews all have secure access to the system.
