
Telnet has an established General Services Administration (GSA) contract schedule 70 for Information Technology & Engineering services, Telecom Product, and Support Services. We provide the federal and state government access to highly specialized resources in Engineering and IT including, Project Managers, Network Engineers, RF Engineers, System Engineers, Voice & Data Engineers, System Integration resources, and installers. The products include unified communication, video conferencing systems, telephony systems, and call centers.

The GSA is a centralized authority for the acquisition and management of federal government resources. GSA Contracts, are indefinite delivery, indefinite quantity (IDIQ), long-term contracts and were developed to assist federal employees in purchasing products and services, and contain pre-negotiated prices, delivery terms, warranties, and other terms and conditions. The benefit of a GSA contract for the government, Telnet and the country is that purchases can be made directly from a contractor's GSA Schedule Contract, eliminating time-consuming responses to complex RFP's and lengthy negotiations - thereby reducing paperwork and increasing efficiency.
